

PRODUCT DESCRIPTION

MXBON® products.

Technical Data Sheet MXBON® 037387

Storage & Handling precaution

Keep the product in a cool and dry place. The storage temperature is recommended at 8 °C to 24 °C. Do not return the product to original container. Shelf life is two years from the date of manufacture in the original container under the optimal conditions. For more details, consult Cartell Chemical Co., Ltd.

Revision: EN005

Revision Date: June. 2025

- 1. Using in a well-ventilated place
- 2. If contact with skin, rinse with water.
- 3. If adhesive gets into eye, keep eye open and rinse with water thoroughly. Seek medical attention immediately.
- 4. Keep this product out of children's reach.

MXBON® 037387 is designed to initiate the cure process for

TYPICAL PERFORMANCE

Shelf life

According to ISO 4587 method, using MXBON® 037387 correspond with different acrylic adhesive products. Fixture time and cure speed achieved depend on adhesive used, the substrate bonded, surface cleanliness and either single or double sided processing operations.

24 months (Unopened

condition)

MXBON® 037387 is designed with the following products:

- MXBON® 31324
- MXBON® 31330
- MXBON® 31332
- MXBON® 41352

Fixture time ISO 4587, single side activation. Mild Steel (Degreased) using MXBON® 31330

≤3 mins

GENERAL INFORMATION

This product is not recommended for use in pure oxygen and/or oxygen rich systems and should not be used with chlorine or other strong oxidizing materials. For safety information, please refer to Safety Data Sheet (SDS). Where washing systems are used to clean the surfaces before bonding, it is important to check the compatibility of the washing solution with the adhesive. In some cases, these solutions can affect the cure and performance of the adhesive. Users are recommended to confirm compatibility of the product with such substrates.

Directions for use

For assembly

- Contaminated surfaces may need repeated treatment or special degreasing prior to activation to remove any dissolvable contamination.
- 2. Shaking well before use.
- For large gap (≥0.5mm), treat on both mating surfaces to be bonded. In contrast, small gaps treatment of only one surface maybe adequate.
- 4. Allow around 100 seconds for solvent to evaporate. After the solvent evaporates, the active ingredients will appear wet, and will remain active for up to 2 hours after application. Contamination of the surface before bonding should be prevented.
- 5. Where adhesive is applied onto an activated surface, assembly should be completed as quickly as possible (within 15 seconds).
- 6. Secure the assembly and await fixturing before any further handling.
